RGB-MiniLED

Product appearance may vary by screen size.

Introducing the next-generation UX Series—the most advanced television Hisense has ever created. This industry-leading RGB MiniLED revolution sets a new standard in home entertainment, delivering unparalleled color accuracy, breathtaking brightness, and precision beyond OLED and QLED. Hisense is at the forefront of TV innovation, shaping the future of how we watch, play, and experience content. No other TV offers this level of color and performance—the Hisense UX isn't just leading the market, it's redefining it.

RGB-MiniLED with up to 8000 nits Peak Brightness

Take your Mini-LED up a level with the RGB-MiniLED. The RGB Local Dimming technology is the first of its kind and replaces standard blue and white LEDs with red, green, and blue ones for the most realistic color. Experience ultra-sharp contrast and purest hues with peak brightness reaching up to 8,000 nits and 20,000+ color control units.

Hi-View AI Engine X

Driven by Deep Neural Networks, Hi-View AI Engine X is engineered for ultimate precision. This processor continuously analyzes and adapts in real time, enhancing every frame and audio layer for stunning realism. From high-speed sports to cinematic epics and immersive gaming, it delivers breathtaking detail and dynamic sound—a viewing experience that evolves with you.

6.2.2 CineStage X Surround

Dive into auditory brilliance with Hisense's 6.2.2 multi-channel speakers and Opéra de Paris | Devialet sound system. Feel the emotion just like you're in the scene, not only hear the voice.

Total HDR Solution

Multiple audio-visual technologies come together to draw you into the story—through vibrant colors, refined textures, and immersive stereo sound. With HDR10+ Adaptive, Dolby Vision, Dolby Atmos, and DTS Virtual:X, every scene surrounds you with lifelike presence.

3D Color Master Pro

Watch the game, show, or movie in purer, richer color thanks to the TV's specialized RGB-MiniLED. It covers 95% of the BT.2020 color gamut and is both Pantone Validated and Pantone SkinTone Validated for color accuracy you can trust.

Native 165Hz Panel

Turbo power your gaming! 165Hz Game Mode Ultra has a Variable Refresh Rate of 48Hz to 165Hz, almost as fast as your reaction time. AMD FreeSync Premium Pro, Auto Low Latency Mode and Low Latency MEMC eliminate screen tearing and controller lag. And with our new Game Bar you can control multiple game settings right from your TV remote and on-screen display.

Anti-Reflection Pro

Keep your eye on the ball all day and all night long. Anti-Reflection Pro incorporates a special coating into the liquid crystal layer of the screen to minimize glare and reflections, so you can see the picture in all of its vibrancy and detail without any interference.

Google TV

Entertainment you love. With a little help from Google. Google TV brings together movies, shows, live TV and more from across your apps and subscriptions and organizes them just for you.
