Getting Started

1. Set up your refrigerator

- Remove tape and glue residue and clean surfaces with soap and water before turning on the refrigerator.
- If you are using your refrigerator in a kitchen, we recommend you set your temperature at 37°F (3°C). After 24 hours, you can adjust the control as desired, allowing the temperature to stabilize.

Press either **+** or **-** to adjust to desired temperature setting inside the refrigerator. **°F/°C** allows you to switch between Fahrenheit (°F) and Celsius (°C).

2. Keep your refrigerator fresh

- More powerful than baking soda, **PureAir® Ultra II™ Air Filter** absorbs undesirable smells keeping your fridge fresher for up to 6 months.
- Extend the life of fruit and vegetables with **PureAir PK-2 Produce Keeper Plus™** reducing food waste and saving money..

3. Prime the water supply system for your PurePour™ Water Filter

After installing your water and air filters, be sure to prime the water supply system before dispensing water for the first time. If you do not flush the system, the first glasses of water may be discolored or have an odd flavor.

- Hold a glass against the paddle for about 4 minutes to purge air from the system.
- Continue dispensing at least 1 full gallon (3.6 L) of water and discard.

We recommend replacing filters at least once every 6 months.

FAQs

How do I use the water dispenser?

Your water dispenser is mounted on the left-hand side of your interior refrigerator wall. To use the water dispenser simply push the water nozzle so it's fully extended. Place your cup against the paddle and press to dispense water. When you're finished, lock the water dispenser in place by pushing the nozzle back in place.

Why does my refrigerator seem to run continuously?

Your variable speed compressor is designed to run 100% of the time except during the defrost cycle. At times it will run faster, such as after a defrost cycle.

The temperature is warmer or colder than preferred. What can I do?

Simply adjust the temperature by 1 or 2 degrees and allow 24 hours for the temperature to stabilize. Check to ensure food items are not blocking the multi-port air exhaust ducts as this will impact temperature performance.
