INSTALLATION

6.1 Installation Instructions

Important Note:

- Prior to installation, please read the Fotile Range Hood Installation carefully and save it for the local inspector's future reference.
- This appliance must be installed in accordance with National Electrical Codes, as well as all state, municipal and local codes.
- The appliance must be equipped with safe circuit breaker and installed with safe grounding.
- The correct voltage, frequency and amperage must be supplied to the appliance according to the proper voltage, frequency and amperage ratings listed on the product rating plate.
- This installation must be completed by Fotile authorized service center, or certified installers.
- Please record the model and serial number before installing the range hood. Position of plaque can be referred to in figure A as follows.
- The following diagrams are those of basic models(JQG7505), for those derivative models please refer to these diagrams of basic models:

Caution:

- Please carefully read all instructions prior to installation. Please give special consideration to the following items:
 - 1.If you are renovating your kitchen, be careful to not expose the exterior of the range hood. Building materials, dust, paint, coating, and gases will corrode and tarnish the surface of the range hood. It is recommended that you install the range hood after all renovations are completed.
 2. If you need to remove your gas burner before

installation, please turn off the main gas valve first.

3. Do not connect the range hood duct to a duct used to exhaust hot air or fumes from another appliance.

4. Two installers are recommended due to the large size and heavy weight of the range hood. Since the installation is complex and the appliance is heavy, professional installers are required to install the appliance as outlined in this manual.

5. After the appliance fixed, the plug should be accessible.

6. Make sure to keep the appliance horizontally.

7. Ensure that the appliance functions normally after the installation is complete.

Warning:

- In order to reduce the risk of fire, electric shock, or injury to persons, please carefully read the following:

1. The installation and wiring of the appliance should only be carried out by a professional electrician in accordance with current national or local electric safety regulations, including fire-rated construction. Non-professional personnel should not conduct installation. Proper installation is the responsibility of the installer.

Product failure due to improper installation is not covered under the Fotile warranty.

2. Please use standard installation equipment and tools provided by Fotile to ensure safe installation. Make sure to use the expansion tube and expansion bolt provided by our company, in case the range hood falls down accidentally. The hole drilled into the wall should precisely match the size of the expansion tube, otherwise the range hood will not be properly secured to the wall and may fall down.

3. The range hood should be connected to a standard power socket with safe grounding. The midway connection, prolonged electric line or multi-socket wiring may cause electric shock, overheating and even fire.

Power off before wiring and make sure proper measures have been taken to avoid unexpected connection.

4. During installation, switch off the circuit breaker in the fuse box during installation. If the supply cord is damaged, it must be replaced by a special cord or assembly available from the manufacturer or its service agent.
5. The appliance should only be installed, removed and maintained by qualified technicians to prevent risks like electric shocks, falling or fires from occurring.

Risk of Injury:

- Unplug the appliance from the mains or switch off the circuit breaker in the fuse box before installation, cleaning, maintenance and repair in order to avoid electric shock.
- The range hood may have sharp edges. Be careful to avoid cuts and abrasions during installation and cleaning. Do wear qualified protective gloves.

Warning Before Installation

- Prior to installation, ensure that the exhaust outlet is free of debris, as they may damage the range hood.
- A straight and short ducting run will ensure a high performance of the range hood.
- A curving and long ducting run should be avoided, as it will lower the performance of the range hood.
- Strictly seal the connection between the duct and duct hole with duct tape. Ensure that the connection between the duct and the duct cover is secure, and seal it with aluminum tape.
- A small duct hole will lower the performance of the range hood. Therefore, it is highly recommended that you cut a duct hole equal to or larger than 6" (152.4mm) of the size.
- The bolts used in this product are metric-size bolts, please do not apply any unqualified bolts.

6.2 Product Dimensions

Wall Preparation

The wall should be strong enough to support the range hood. As for hollow wall or hollow plate, The minimum thickness of the lumber should be 13/16" (30mm). As for concrete wall, the installation can be directly operated. The range hood should be firmly fixed on the wall.

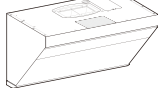

Ductwork Installation

Risk of Injury:

- Unplug the appliance from the mains or switch off the circuit breaker in the fuse box before installation, cleaning, maintenance and repair in order to avoid electric shock.
- The range hood may have sharp edges. Be careful to avoid cuts and abrasions during installation and cleaning. Do wear qualified protective gloves.
- When cutting or drilling into walls or ceilings, do not damage electrical wiring and other hidden utilities.
- Ducted fans must always be vented to the outdoors.
- To reduce the risk of fire and to properly exhaust air, always duct air outside. Do not vent exhaust air into spaces within walls, ceilings, into attics, crawl spaces or garages.

6.4 Installation Tools:

6.5 Installation Procedure:

In order to secure the safe use of the range hood and maximize its ability to ventilate cooking fumes, the installation height is suggested as follows: The distance from the countertop of the gas stove to the top board of the range hood shall not be less than 29 9/16"(750mm) and shall not be more than 32 1/2"(825mm). This installation height is only applicable to electric ranges. If the range hood is installed above a gas range, the minimum distance between the supporting surface of the cooking appliance on the range and the lowest part of the range hood should be at least 24"(610mm)(in USA)/25 5/8"(650mm)(in Canada). If the installation instructions for the gas range specify a larger installation distance, this should be considered. The installation height of the range hood is the recommended value, and the cupboard and the range hood shown in the figure is for reference only. When the installation height of this product

(i.e. the distance between the supporting surface of the cooking appliance on the range and the lowest part of the range hood) is lower than 24"(610mm)(in USA)/25 5/8"(650mm)(in Canada), all parts below 24"(610mm)(in USA)/25 5/8"(650mm)(in Canada) are non-flammable parts of the range hood or parts working under safe and ultra-low voltage, and the deformation of these parts will not affect the protection against the touch of live parts.

The kitchen hood shall be installed at the recommended installation height for better fume absorption. The fume absorption performance will be affected to certain extent if the actual installation height is larger than the recommended installation height. If relevant laws in the region stipulate the installation height of range hood, it is recommended to abide by relevant laws.

The range hood can be installed in three ways, either with or without the upper cabinet.

Caution:

1. One of the wood screws(#10×2 9/16"(ST5×65mm)) for duct bracket must be fastened to the wooden beam.
2. If it is necessary to drill the duct outlet at the back wall, the distance from the top plane of the range hood to the center of the hole should be at least 8"(203mm).

Warning: Excessively low installation height can cause overheating of the glass panel, increasing the possibility of breaking.

Installation of the Fotile Range Hood with an Upper Cabinet:

Warning: Do wear qualified protective gloves.

1. Unpack the appliance and check the List of Accessories.

2. Locate the wooden beam and mark the location with a pencil.

3. Locate the duct bracket. Determine the central point and mark the centerline on the wall where the hood will be installed. Also, mark the point where the central line and the lowest point on the bottom board of the top cabinet meet. This is the location, in which to secure the bracket. Mark screw hole locations on the wall. The distance between the lowest point on bottom board of the top cabinet and the center of the bracket should be 16" (405mm).

Caution: One of the wood screws(#10×2 9/16"(ST5×65mm)) for main engine must be fastened to the beam.Screws must be fixed at Hole A and B in the drawing; also wood screws(#10×2 9/16"(ST5×65mm)) must be fixed at bracket bores with corresponding wooden stakes in Area C.

4. Fixing hooks:

1) Punch marks are on tiles (marble): Punch holes ($\phi 3/8"$ ($\phi 8\text{mm}$)) with an electric drill at the marks, and embed expansion tube for tiles($\phi 1/4" \times 1 5/16"$ ($\phi 5.3 \times 32\text{mm}$)); fix hook with hook screws(#8×1 7/16"(ST4.2×36mm)), and keep the hook level with a level ruler.

2) Punch marks are on plasterboards: Screw the expansion tube for plasterboards($\phi 3/16" \times 1 5/8"$ ($\phi 4 \times 40\text{mm}$)) into walls with screwdrivers at the marks; fix hooks with hook screws(#8×1 7/16"(ST4.2×36mm)), and keep the hook horizontal with a level ruler.

5. Place the hole-drilling template with the side of the hole-drilling dimension drawing facing down on the bottom of the upper cabinet, and then drill the holes as indicated on the hole-

drilling template.

Caution: Wear safety goggles when drilling. In case of batten at the wall facing the bottom plate, the rear wall side of the paper template shall be cut as per the thickness of the batten. If it is necessary to fix the hook on the tile, the “Rear Wall” side of the hole-drilling template should be attached to the bottom of the upper cabinet, using the tile surface as a reference.

6. Remove the protective film of the stainless steel surface and Grease Cup at both sides of the range hood.

7. Lift and position the hood onto the brackets at the bottom of the backside while keeping an angle between the wall and the hood, and then push the hood against the wall tightly.

Caution: Two installers are required to ensure safe installation.

8. Use three sets of screws (#10×2 13/16" (M5×70mm)) for upper cabinet boards and supporting gaskets (φ1 5/16" (φ32mm)) to fix the main body, and secure at least two screws before releasing.

If there is a big gap between the bottom board of the top cabinet and the top of the range hood, please add wood pads based on the gap size near the three #10×2 13/16" (M5×70mm) screws to avoid range hood shell deformation caused by the tightening of screws, which will affect the use of the range hood.

9. Place the seal (notch downward) at the air outlet of the machine and fix the outlet housing with 4 outlet-housing bolts of #8×3/4" (M4×18mm). Then, secure the duct to the duct cover and seal the connection with aluminum tape.

10. Make sure the hood is leveled. Install the Grease Cup, and plug in the appliance for a test run.

Warning: Please wear the qualified protective gloves in operation.

Caution: Please run the machine and test if the smoke pipe leaks air after it is sealed with aluminum foil tape. The smoke pipe should be able to be straightened as much as possible.

Installation Instructions for the Decorative Plate with Upper Cabinet :

Caution: Please confirm the height of the top cabinet. If the upper cabinet is over 32 1/2" es (825mm) high, 6"(152.4mm) or 4"(101.6mm) decorative plate is preferred.

1. Unpack the appliance and check the List of Accessories.

2. Locate the wooden beam and mark the location with a pencil.

3. Locate the duct bracket. Determine the central point and mark the centerline on the wall where the hood will be installed. Also, mark the point where the central line and the top cabinet meet. This is the location, in which to secure the bracket. Mark screw hole locations on the wall. The upper edge (the fixed surface between the decorative sheet and the board of the top cabinet) of the bottom board of the top cabinet shall be deemed as the location datum. And the distance between the upper edge and the center of the bracket shall be 7 11/16"(194.4mm)for 6"(152.4mm) decorative sheet and 5 11/16"(143.6mm) for 4"(101.6mm) decorative sheet.

Caution: One of the wood screws(#10×2 9/16"(ST5×65mm)) for main engine must be fastened to the beam. Screws must be fixed at Hole A and B in the drawing; also wood screws(#10×2 9/16"(ST5×65mm)) must be fixed at bracket bores with corresponding wooden stakes in Area C.

4. Fixing hooks:

1) Punch marks are on tiles (marble): Punch holes ($\phi 3/8"$ ($\phi 8\text{mm}$)) with an electric drill at the marks, and embed expansion tube for tiles ($\phi 1/4" \times 1 5/16"$ ($\phi 5.3 \times 32\text{mm}$)); fix hook with hook screws (#8 $\times 1 7/16"$ (ST4.2 $\times 36\text{mm}$)), and keep the hook level with a level ruler.

2) Punch marks are on plasterboards: Screw the expansion tube for plasterboards ($\phi 3/16" \times 1 5/8"$ ($\phi 4 \times 40\text{mm}$)) into walls with screwdrivers at the marks; fix hooks with hook screws (#8 $\times 1 7/16"$ (ST4.2 $\times 36\text{mm}$)), and keep the hook horizontal with a level ruler.

5. Place the hole-drilling template with the side of the hole-drilling dimension drawing facing down on the bottom of the upper cabinet, and then drill the holes as indicated on the hole-drilling template.

Caution: Wear safety goggles when drilling.

In case of batten at the wall facing the bottom plate, the rear wall side of the paper template shall be cut as per the thickness of the batten.

If it is necessary to fix the hook on the tile, the "Rear Wall" side of the hole-drilling template should be attached to the bottom of the upper cabinet, using the tile surface as a reference.

6. Remove the protective film of the stainless steel surface and Grease Cup at both sides of the range hood.

7. Place the seal (notch downward) at the air outlet of the machine and fix the outlet housing with 4 outlet-housing bolts of #8 $\times 3/4"$ (M4 $\times 18\text{mm}$).

8. Lift and position the hood onto the brackets at the top of the backside while keeping an angle between the wall and the hood, and then push the hood against the wall tightly. Secure the duct to the duct cover and seal the connection with aluminum tape.

Caution: Two installers are required to ensure safe installation.

9. Install the decorative plate.

Fix the decorative panel in place with 4 #6 $\times 1 7/16"$ (ST3.5 $\times 35\text{mm}$) wood screws and fix the decorative panel on the upper cabinet plate (the wood screws are provided in the accessory bag in the packing box of the decorative panel).

10. Make sure the hood is leveled. Install the Grease Cup, and plug the appliance for a test run.

Warning: Please wear the qualified protective gloves in operation.

Caution: Please run the machine and test if the smoke pipe leaks air after it is sealed with aluminum foil tape. The smoke pipe should be able to be straightened as much as possible.

Installation Instructions for the Decorative Cover Without Upper Cabinet

1. Unpack the appliance and check the List of Accessories.

2. Locate the wooden beam and mark the location with a pencil.

3. Locate the duct bracket, safety buffer baffle and decorative cover bracket:

Caution: one of the wood screws(#10×2 9/16"(ST5×65mm)) for main engine must be fastened to the beam.Screws must be fixed

at hole A and B in the drawing; also wood screws(#10×2 9/16"(ST5×65mm)) must be fixed at bracket bores with corresponding wooden stakes in area C.

Firstly determine the installation central point of the range hood according to the central point of the cooker, determine the bracket installation location based on cooker table and mark the place for drilling. The cooker table is about 27 7/8" (708 mm) to 31 13/16"(808mm) away from the central point of bracket;

The location to install the safety buffer baffle should be 4 9/16" (115.5 mm) to the left of the duct bracket and 2 5/16" (58.5 mm) straight up.

The location to install the decorative cover bracket should generally be 29 15/16 " (760 mm) above the central point of the duct bracket. If the distance between the ceiling and duct bracket equals to or is less than the value, secure the decorative cover bracket on the wall right under the ceiling. If the distance is more than the value, taller decorative covers (27 9/16" (700 mm) and 35 7/16" (900 mm) in height respectively) need to be bought separately.

Embed the expansion tube in the punch marks:

1) Punch marks are on tiles (marble): Punch holes ($\phi 3/8"$ ($\phi 8$ mm)) with an electric drill at the marks, and embed expansion tube for tiles($\phi 1/4" \times 1 5/16"$ ($\phi 5.3 \times 32$ mm)).

2) Punch marks are on plasterboards: Screw the expansion tube for plasterboards($\phi 3/16" \times 1 5/8"$ ($\phi 4 \times 40$ mm)) into walls with screwdrivers at the marks.

4. Secure the duct bracket and decorative cover bracket to the wall with corresponding screws and tighten the screws. Make sure the bracket is leveled.

Caution: One of the wood screws(#10×2 9/16"(ST5×65mm)) for duct bracket must be

fastened to the wooden beam.

5. Place the seal (notch downward) at the air outlet of the machine and fix the outlet housing with 4 outlet-housing bolts of #8×3/4"(M4×18mm). Fix four outer cover bolts of #8×7/16" (M4×10mm) at the corresponding positions (The cover screws is provided in the accessory bag in the packing box of the decorative cover assembly.).

6. Remove the protective film of the stainless steel surface and Grease Cup at both sides of the range hood.

7. Lift and position the hood onto the mounting screws. Make sure the hood is stable and leveled by using a spirit level. Install the safety buffer baffle above the hood(The safety block is provided in the accessory bag in the packing box of the decorative cover assembly.).

Caution: Two installers are required to ensure safe installation. Please install the safety stop as required. The main function of the safety stop is to prevent the range hood from being lifted up accidentally, which will cause it to unhook and potentially fall.

8. Secure the duct to the duct cover and seal the connection with aluminum tape.

Make sure the hood is leveled. Install the Grease Cup, and plug the appliance for a test run.

Caution: Please run the machine and test if the smoke pipe leaks air after it is sealed with aluminum foil tape. The smoke pipe should be able to be straightened as much as possible.

9. First, tear off the protective film on the decorative cover and fan cover, and put the decorative cover into the fan cover. Then take up the decorative cover and fan cover, hang the decorative cover on the decorative cover hook, lower the fan cover slowly, and push the decorative cover and fan cover inward until the fan cover is fastened to the corresponding cover screws.

10. Install the Grease Cup.

Warning: Please wear the qualified protective gloves in operation.

6.6 Test Run After Installation:

1. Lightly press the POWER button. Next, lightly press the LIGHTING button. At this time, the smoke baffle plate and lights should work normally.

2. Lightly press the fan buttons to check the motor. If any of the following malfunctions occurs, unplug the hood immediately and re-check the installation process. (If the malfunction continues, contact our authorized service center as soon as possible.)

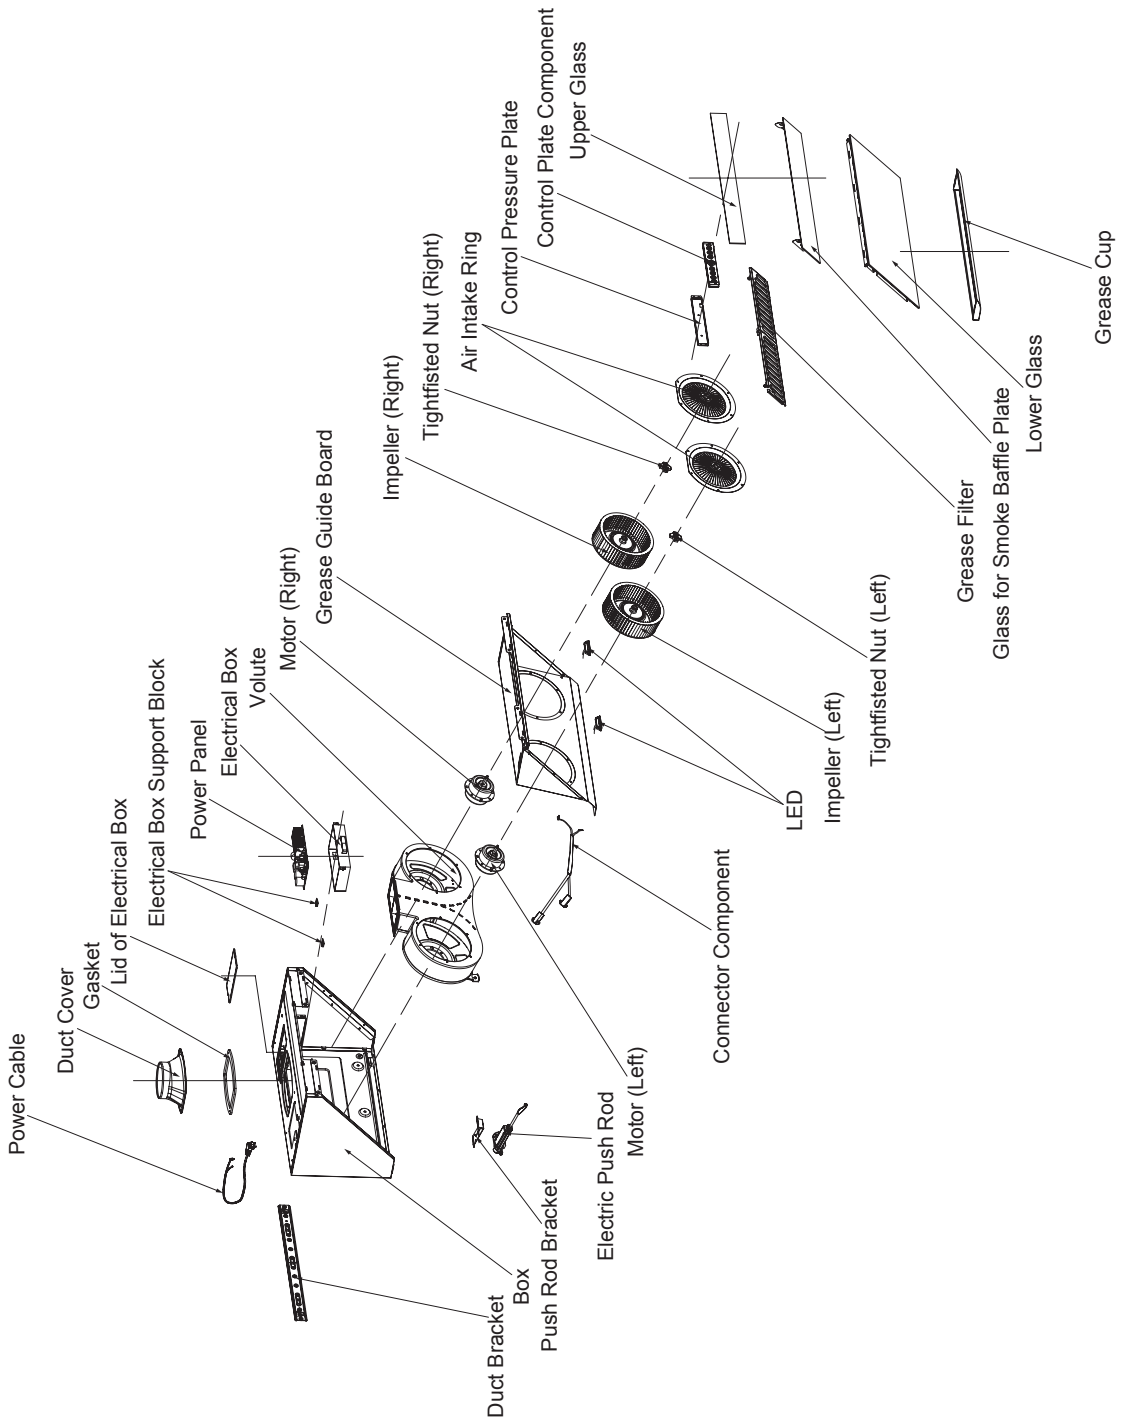

(1) The hood vibrates violently.

(2) The impeller does not work.

(3) The impeller grates while rotating.

(4) The motor makes strange sounds.

3. Lightly press the POWER button again to turn off the fan and close the smoke baffle plate.

五、安装步骤

为保证油烟机使用安全和最佳吸油烟效果，建议安装高度：从台面到油烟机顶部不得低于 29 9/16"(750mm)，最高不要超过 32 1/2"(825mm)。此安装高度只适用于电灶，如果吸油烟机安装在燃气炉灶上方，炉灶上烹调器具的支承面与吸油烟机最低部位的最小距离应至少为 24"(610mm)(美国)/25 5/8"(650mm)(加拿大)。如燃气炉灶安装说明规定了较大的安装距离则对此应予考虑。吸油烟机的安装高度为推荐值，图示橱柜与吸油烟机搭配示意仅供参考，当本产品的安装高度（即炉灶上烹饪器具的支承面与吸油烟机最低部位的距离）低于 24"(610mm)(美国)/25 5/8"(650mm)(加拿大)时，低于 24"(610mm)(美国)/25 5/8"(650mm)(加拿大)部分的所有部件均为吸油烟机的不易燃部件或工作在安全特低电压下的部件，且这些部件变形时，不会影响对触及带电部件的防护。

为保证吸油烟效果，请在推荐安装高度内安装吸油烟机。若实际安装高度超过推荐安装高度，则产品的吸油烟效果可能会受到一定影响。

如所属地区有相关法律规定油烟机安装高度，建议遵守相关法律。

此油烟机安装分为有上柜、无上柜共三种安装方式。

注意：

1. 主机挂钩必须有一个木螺钉 (#10×2 9/16"(ST5×65mm)) 要固定在木柱上。
2. 如需在背面墙体开出风管出口，建议油烟机顶平面到开孔中心点距离不低于 8"(203mm)。

警告：安装高度过低可能导致油烟机玻璃面板过度受热，增加破碎的风险。

有上柜：

警告：请带防护手套操作。

1. 打开包装箱拿出主机，清点附件清单。

2. 在安装位置找到固定挂钩的木柱并用铅笔做好标记。

3. 确认固定主机挂钩的位置：首先确认油烟机安装中心点画一条垂直的中心线，然后以上柜板底

部最低点为基准确认挂钩安装位置，做好打孔标志。尺寸为：上柜板底部最低点到挂钩孔中心距 $16''$ (405mm)

注意：主机挂钩必须有一个木螺钉 (#10×2 9/16" (ST5×65mm)) 要固定在木柱上。

图上孔 A、孔 B 必须固定螺钉，区域 C 挂钩孔位能对应木柱部分必须固定木螺钉 (#10×2 9/16" (ST5×65mm))。

4. 固定挂钩：

1) 打孔标识处是瓷砖 (大理石)：在打孔标识处用电钻打 $\phi 3/8''$ ($\phi 8\text{mm}$) 孔，并埋设瓷砖膨胀管 ($\phi 1/4'' \times 1 5/16''$) ($\phi 5.3 \times 32\text{mm}$)，用挂钩螺钉 (#8×1 7/16" (ST4.2×36mm)) 固定挂钩，并用水平尺确保挂钩水平。

2) 打孔标识处是灰板：在打孔标识处直接用螺丝刀将灰板膨胀管 ($\phi 3/16'' \times 1 5/8''$) ($\phi 4 \times 40\text{mm}$) 拧进墙面，然后用挂钩螺钉 (#8×1 7/16" (ST4.2×36mm)) 固定挂钩，并用水平尺确保挂钩水平。

5. 把开孔尺寸纸有开孔尺寸图的一面朝下贴在上柜板底部，然后按开孔纸上要求开孔。

注意：开孔要带上防护眼镜。

如遇底板靠墙一侧有木条，开孔纸 Rear Wall 侧按此木条厚度裁剪。

如遇挂钩固定在瓷砖上，开孔纸 Rear Wall 一侧应以瓷砖面为基准贴在上橱柜的底部。

6. 把整机两侧不锈钢表面和油杯保护膜撕掉。

7. 抬起主机倾斜着将背底部挂钩孔挂上挂钩，再将烟机推上去靠紧墙壁。

注意：为了安全你需要两个人来安装这个油烟机。

8. 用 3 颗 #10×2 13/16" (M5×70mm) 上柜板固定螺钉和 3 个 φ 1 5/16" (φ 32mm) 上柜板固定螺钉垫圈固定主机，至少固定两颗螺钉后才能松手。

如上柜底板与油烟机壳体之间有较大间隙，安装

前，请在 3 颗 #10×2 13/16" (M5×70mm) 螺钉附近依据间隙大小加垫木块，以免螺钉紧固时使油烟机壳体发生变形而影响使用。

9. 在主机出风口放好密封垫（缺口朝下），用 4 颗 #8×3/4" (M4×18mm) 出风罩螺钉固定好出风罩。再把烟管固定在出风罩上用铝箔胶带做好密封。

10. 整机必须保持水平，再把油杯安装上去并插上电源试机。

警告：请戴防护手套操作。

注意：铝箔胶带密封后，请开机测试烟管是否有漏风。烟管尽量能够拉直。

有上柜加装饰板

注意：请先确认上柜高度，如果超过 32 1/2" (825mm)，则参考选配 6" (152.4mm) 或 4" (101.6mm) 装饰板。

1. 打开包装箱拿出主机，清点附件清单。

2. 在安装位置找到固定挂钩的木柱并用铅笔做好标记。

3. 确认固定主机挂钩的位置：首先确认油烟机安装中心点画一条垂直的中心线，然后以上柜板为基准确认挂钩安装位置，做好打孔标志。尺寸为：上柜底板上檐（装饰板与上柜板固定面）为定位基准到挂钩孔中心点距离为 6" 装饰板 7 11/16" (194.4mm)，4" 装饰板 5 11/16" (143.6mm)

注意：主机挂钩必须有一个木螺钉 (#10×2 9/16" (ST5×65mm)) 要固定在木柱上。图上孔 A、孔 B 必须固定螺钉，区域 C 挂钩孔位能对应木柱部分必须固定木螺钉 (#10×2 9/16" (ST5×65mm))。

4. 固定挂钩：

1) 打孔标识处是瓷砖 (大理石)：在打孔标识处用电钻打 $\phi 3/8"$ ($\phi 8\text{mm}$) 孔，并埋设瓷砖膨胀管 ($\phi 1/4" \times 1 5/16"$ ($\phi 5.3 \times 32\text{mm}$))，用挂钩螺钉 (#8×1 7/16" (ST4.2×36mm)) 固定挂钩，并用水平尺确保挂钩水平。

2) 打孔标识处是灰板：在打孔标识处直接用螺丝刀将灰板膨胀管 ($\phi 3/16" \times 1 5/8"$ ($\phi 4 \times 40\text{mm}$)) 拧进墙面，然后用挂钩螺钉

(#8×1 7/16"(ST4.2×36mm)) 固定挂钩，并用水平尺确保挂钩水平。

5. 把开孔尺寸纸有开孔尺寸图的一面朝下贴在上柜板底部，然后按开孔纸上要求开孔。

注意：开孔要带上防护眼镜。

如遇底板靠墙一侧有木条，开孔纸 Rear Wall 侧按此木条厚度裁剪。

如遇挂钩固定在瓷砖上，开孔纸 Rear Wall 一侧应以瓷砖面为基准贴在上橱柜的底部。

6. 把整机两侧不锈钢表面和油杯保护膜撕掉。

7. 在主机出风口放好密封垫（缺口朝下），用 4 颗 #8×3/4"(M4×18mm) 出风罩螺钉固定好出风罩。

8. 抬起主机将背上部挂钩孔挂上挂钩，再把烟管固定在出风罩上用铝箔胶带做好密封。

注意：为了安全你需要两个人来安装这个油烟机。

9. 安装装饰板

用 4 颗 #6×1 7/16"(ST3.5×35mm) 木螺钉固定装饰板，把装饰板固定在上柜板上（木螺钉在装饰板包装箱中的附件包内）。

10. 整机必须保持水平，再把油杯安装上去并插上电源试机。

警告：请戴防护手套操作。

注意：铝箔胶带密封后，请开机测试烟管是否有漏风。烟管尽量能够拉直。

无上柜加装饰罩

1. 打开包装箱拿出主机，清点附件清单。

2. 在安装位置找到固定挂钩的木柱并用铅笔做好标记。

3. 确认固定主机挂钩、安全挡块和装饰罩挂钩的位置：

注意：主机挂钩必须有一个木螺钉（#10×2 9/16"（ST5×65mm））要固定在木柱上。

图上孔A、孔B必须固定螺钉，区域C挂钩孔位能对应木柱部分必须固定木螺钉（#10×2 9/16"（ST5×65mm））。

首先以灶具中心点确认油烟机安装中心点，然后以灶具台面为基准确认挂钩安装位置，做好打孔标志。尺寸为：灶具台面到挂钩中心点最低 27 7/8"（708mm）—31 13/16"（808mm）；

安全挡块：挂钩中心线往左 4 9/16"（115.5mm）再往上 2 5/16"（58.5mm）

装饰罩挂钩：常规尺寸是，主机挂钩中心点往上最高 29 15/16"（760mm），如果楼层高度在这个尺寸内就把装饰罩挂钩与天花板平齐。如楼层高度高于这个尺寸，那要单独购买加长装饰罩。加长装饰罩高度有两种分别是：27 9/16"（700mm）和 35 7/16"（900mm）

打孔标识处理设膨胀管：

1) 打孔标识处是瓷砖(大理石): 在打孔标识处用电钻打 $\phi 3/8"$ ($\phi 8\text{mm}$) 孔, 并埋设瓷砖膨胀管 ($\phi 1/4" \times 1 5/16"$ ($\phi 5.3 \times 32\text{mm}$))。

2) 打孔标识处是灰板: 在打孔标识处直接用螺丝刀将灰板膨胀管 ($\phi 3/16" \times 1 5/8"$ ($\phi 4 \times 40\text{mm}$)) 拧进墙面。

4. 用相应的螺钉在墙上固定好主机挂钩和装饰罩挂钩并拧紧螺钉, 确认挂钩水平。

注意: 主机挂钩必须有一个木螺钉 (#10 \times 2 9/16" (ST5 \times 65mm)) 要固定在木柱上。

5. 在主机出风口放好密封垫(缺口朝下), 用4颗 #8 \times 3/4" (M4 \times 18mm) 出风罩螺钉固定好出风罩。相应位置固定4颗 #8 \times 7/16" (M4 \times 10mm) 外罩螺钉(外罩螺钉在装饰罩包装箱内的附件包中)。

6. 把整机两侧不锈钢表面和油杯保护膜撕掉。

7. 抬起主机将背部上端的挂钩孔挂上挂钩, 将油烟机挂稳并用水平尺确保水平, 再把安全挡块固定在油烟机上方(安全挡块在装饰罩组件包装箱中的附件包内)。

注意: 为了安全你需要两个人来安装这个油烟机。请按要求安装安全挡块。安全挡块主要作用为, 防止油烟机被意外上抬导致脱出挂钩, 造成掉落风险。

8. 把烟管固定在出风罩上并用铝箔胶带做好密封。确保整机水平并插上电源插头。

注意: 铝箔胶带密封后, 请开机测试烟管是否有漏风。烟管尽量能够拉直。

9. 首先撕掉装饰罩、风机外罩上的保护膜, 把装饰罩放入风机外罩里。然后同时拿起装饰罩和风机外罩, 将装饰罩挂在装饰罩挂钩上, 将风机外罩慢慢放下, 同时推将装饰罩和风机外罩往里推, 直到风机外罩扣到相应的外罩螺钉上。

10. 安装上油杯。

警告：请戴防护手套操作

六、安装后调试：

1. 轻触电源键，再轻触灯键，检查“隔烟屏”是否正常打开，检查照明灯是否正常；
2. 轻触风量键，检测电机转动是否正常，如出现下列异常情况，应立即切断电源，停止运转，并检查是否安装缘故（若确定油烟机发生故障，请尽快与本公司当地授权的服务中心联系）；
 - (1) 机体震动剧烈
 - (2) 叶轮不转动
 - (3) 叶轮转动时明显的摩擦声
 - (4) 电机出现异常声响
3. 轻触电源开关，风机停止转动，隔烟屏关闭。
