Midea's 4.4 cu. ft. Compact Heat Pump Dryer is the first in our new line of space-saving laundry solutions, offering the industry's largest capacity* and optimal drying performance. This ventless dryer pairs with the matching 2.7 cu. ft. Compact Front Load Washer, and together they offer a seamless look when stacked vertically or placed side-by-side.

*Based on 4.4 cu. ft. capacity compared to other Front Load compact dryers. Comparison based on publicly available manufacturer specifications at time of analysis.

Industry's Largest-Capacity Compact Front Load Dryer*

Generous 4.4 cu. ft. capacity lets you easily dry winter coats, bath towels, or queen-size sheets in a single load—all within a compact footprint.

*Based on 4.4 cu. ft. capacity compared to other Front Load compact dryers. Comparison based on publicly available manufacturer specifications at time of analysis.

Perfect Pairing

When paired with the matching MLHW27S7B washer—using the included bracket for vertical stacking—the front faces of both units perfectly align to create a flat, seamless surface.

Space-Saving Solution

This 24" laundry pair can be stacked vertically in small spaces to put everything within easy reach.

4D Sensor Dry

Four strategically placed sensors continuously monitor temperature and moisture levels to prevent under- or over-drying.

Heat Pump

Recirculates hot air to gently dry clothes and conserve energy, and its self-maintaining vent kit removes the need for outside venting and regular cleaning.

Wrinkle Care

Reduces wrinkles by adding periodic tumbling until you open the dryer door.
