PERFORMANCE

SPEED	1	2	3	BOOST
CFM	160	250	395	600
SONES	1.0	2.5	4.0	6.5

RECOMMENDED MOUNTING HEIGHT

All range hoods have a recommended range of installation height over the cooking surface. However cooking styles, types of cooking equipment and installation limitation can vary greatly. For installations outside the recommended range - consult XO.

THESE MODELS HAVE A 6" DIAMETER EXHAUST DUCT WHICH MAY BE CONFIGURED FOR TOP OR REAR DISCHARGE - CONSULT MANUAL FOR ADDITIONAL INFORMATION.

RECIRCULATION

These XOI models may be installed with an optional recirculation kit when venting outside is not practical. When used in recirculation mode the filtered exhaust must be ducted back into the living space. Never discharge the exhaust into a confined space such as a soffit, attic, garage, crawl space or the voids between walls.

RECOMMENDED
MOUNTING HEIGHT
ABOVE
COOKTOPS
27" to 32"

HOW DOES CODE COMPLIANCE CONTROL HELP -

CODE COMPLIANCE CONTROL (CCC) enables the installer to re-program the hood as it is being installed. **Your XO Hood is set to operate at 600 CFM maximum at the factory.**

Re-programming is accomplished quickly and requires no special tools or additional parts but once done, the air flow rate is limited to a maximum of 395 CFM below the 400 CFM cap that most local codes impose eliminating the need for additional controls.

Re-programming also disables the Power Boost function. After conversion, the installer affixes a label stating the unit has been converted to 395 CFM max. Once done, the unit cannot be changed back.

If your application calls for a make-up air solution, XO gives you more choices.
