RECOMMENDED MOUNTING HEIGHT All range hoods have a recommended range of installation height over the cooking surface. However cooking styles, types of cooking equipment and installation limitation can vary greatly. For installations outside the recommended range - consult XO. RECOMMENDED THESE MODELS HAVE A 6" DIAMETER VERTICAL EXHAUST DUCT MOUNTING HEIGHT ABOVE COOKTOPS 27" to 32" RECIRCULATION -These XOS models may be installed VENTS with an optional recirculation kit when venting outside is not practical. When used in recirculation mode the filtered exhaust is directed back into the living space through vents in the telescoping duct cover. These vents SIDE VIEW cannot be covered in the installation. HOW DOES CODE COMPLIANCE CONTROL HELP -**Code Compliance Control**

CODE COMPLIANCE CONTROL (CCC) enables the installer to re-program the hood as it is being installed. Your XO Hood is set to operate at 600 CFM maximum at the factory.

Re-programing is accomplished quickly and requires no special tools or additional parts but once done, the air flow rate is limited to a maximum of 395 CFM below the 400 CFM cap that most local codes impose eliminating the need for additional controls.

Re-programming also disables the Power Boost function. After conversion, the installer affixes a label stating the unit has been converted to 395 CFM max. Once done, the unit cannot be changed back.

If your application calls for a make-up air solution, XO gives you more choices.
